Here are the instructions for using the NT8 Version of Orderflows Pulse:

After installing the indicator, please restart NinjaTrader.

After installing this tool, you will need to enter in the license token in the indicator's property setting.

Please be sure that you are running the latest version of NinjaTrader 8. The software is designed to work best with the most recent version of NinjaTrader 8, which currently is NinjaTrader 8 version 8.1.0.0 To upgrade to the latest version of NinjaTrader 8 go to:

http://www.ninjatrader.com/PlatformDirect and follow the instructions on that page which is just entering your NinjaTrader License Key.

You do not need to send me your machine ID or license key.

If you are not sure what version of NinjaTrader 8 you are running or what your NinjaTrader License ID is that you would enter into the box to get the latest version of NinjaTrader 8, you can check it by going to the Control Panel and clicking on Help ---> About.

Also, it is very important that you have the tick replay setting enabled.

If you don't know if you have it enabled, you can check by going to the Control Panel and clicking on Tools ---> Options ---> Market Data then under the properties on the right side of the window, making sure "Show Tick Replay" is enabled with a tick. If "Show Tick Replay" is not enabled, then the tools will not work properly. Your chart will be empty. Here is how to check if you have the "Tick Replay" enabled or not.

You will know if "Show Tick Replay" is enabled when you go to open a chart and you either have the option to enable "Tick Replay" or not.

Try opening a chart and check if you have this option:

Just make sure it is ticked when opening a chart.

IF YOU DO NOT ENABLE TICK REPLAY THE INDICATOR WILL NOT WORK PROPERLY.

If you try to open a chart but you don't see that box, for example, it looks like this (missing the words "Tick Replay), then you need to follow the steps I just mentioned about going to the Control Panel and clicking on Tools ---> Options ---> Market Data then under the properties on the right side of the window, making sure "Show Tick Replay" is enabled with a tick.

The end.
