

How Do I Load A Template In NinjaTrader?

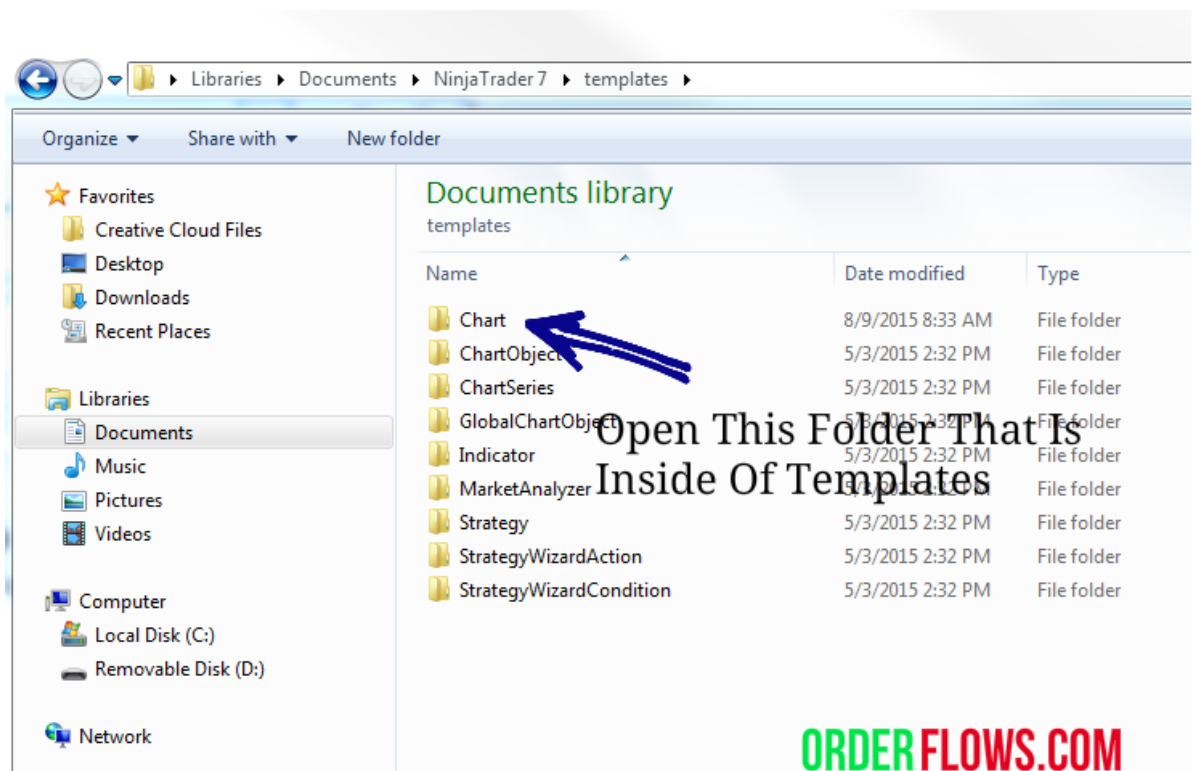

1. Copy it from the file we sent you. It is called "Mikes OFT." It is in the folder called Template.

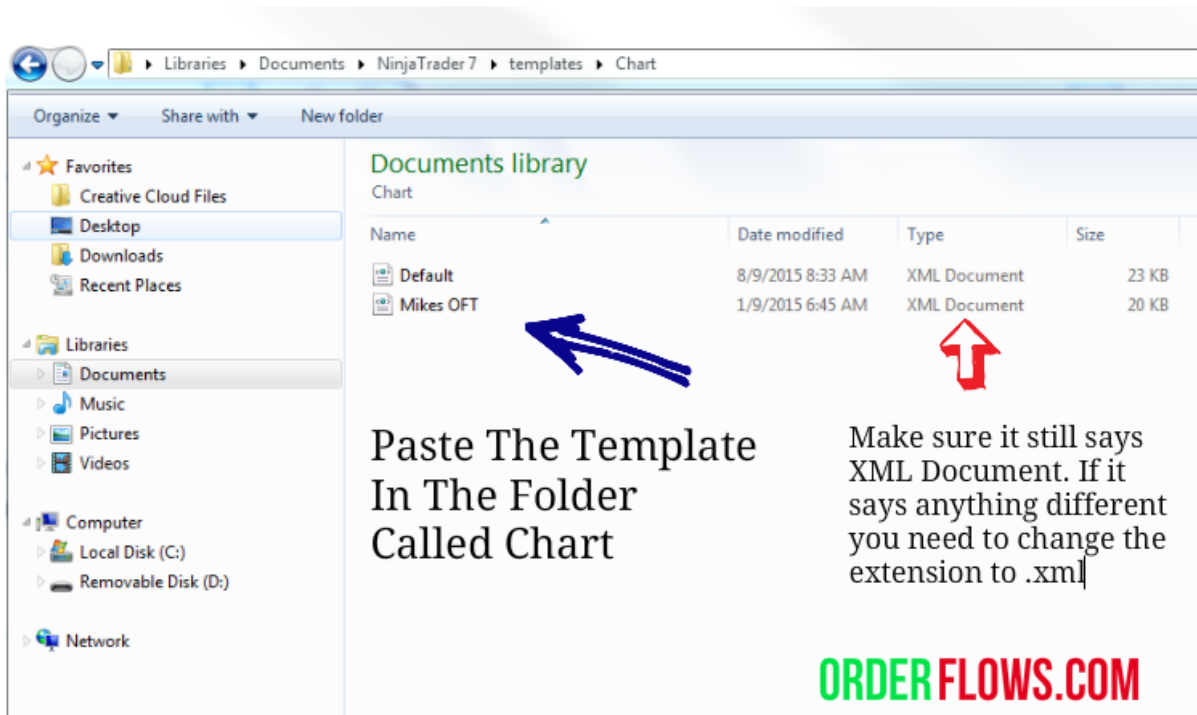

2. Go to your Documents library where NinjaTrader7 files are and look for the folder called templates and open it up.

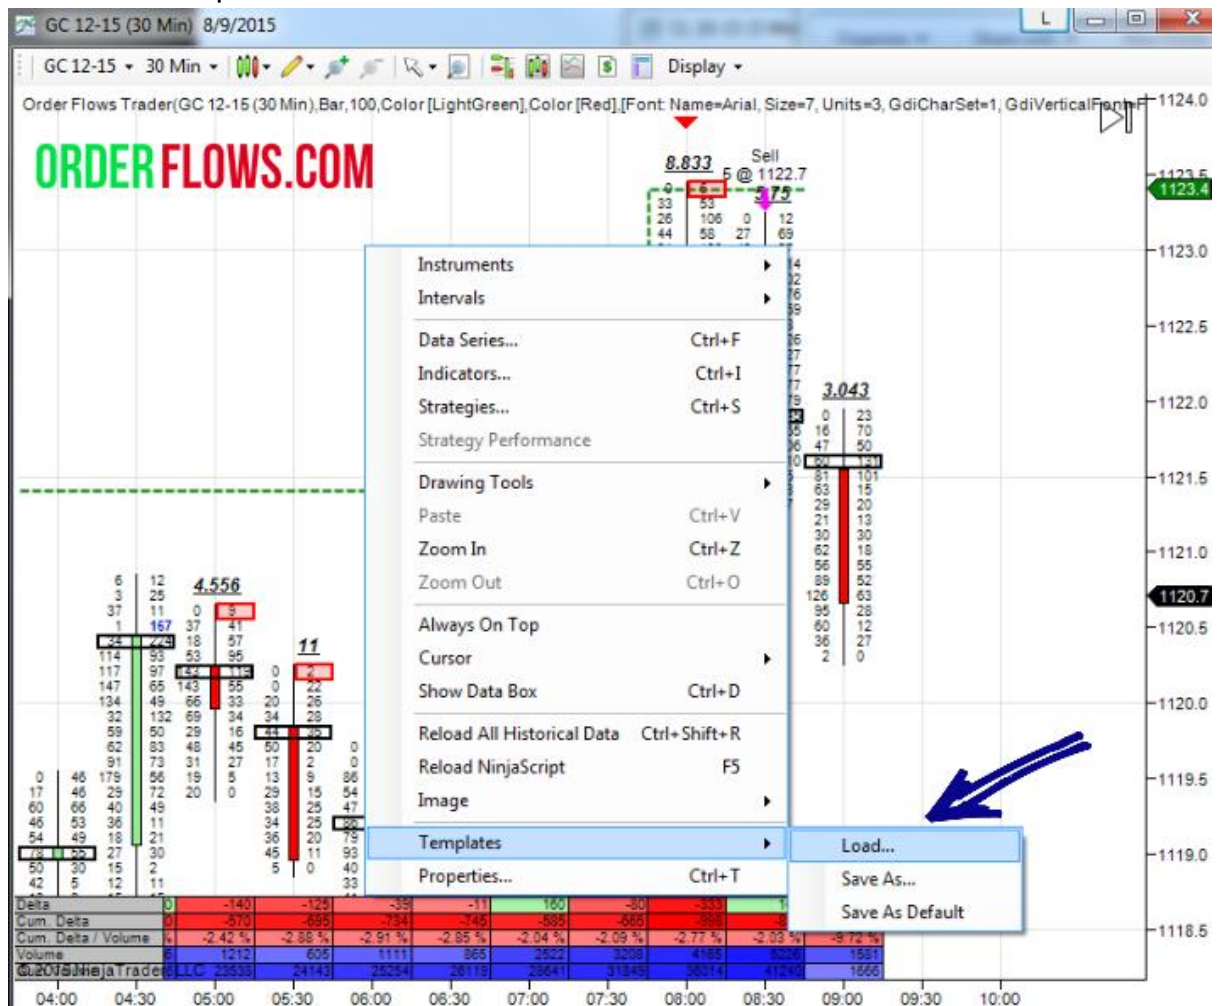

3. Inside the folder called templates is a folder called Chart. Open that folder because that is where you will past the Mikes OFT Template.

4. Paste the template in the folder called Chart and make sure the extension / file type is .xml If it has changed to something else, just change it back to .xml

- Now you need to load it onto your trading screen, so right click on the screen and select templates and choose Load.

6. When you click Load the template should appear as a choice, just select it, click OK and you are good to go.

That's all there is to it!

Happy Trading.
